1) Student Performance Analysis using Data science

Student Performance Analysis

1. Data collection
   - Attendence records
   - Internal marks
   - Assigment scores
   - Final examination results
2. Data Preprocessing
   - Remove duplicate records
   - Handle missing value
   - Correct error in data.
3. Data Integration
   - combine attendance, marks and assignment data into one dataset
4) Data transformation
   - normalize numerical value
   - convert data into suitable format
   - calculate total and average marks
5) Data Analysis
   - Analyze attendance percentage
   - Compare student marks
   - Identify performance pattern
6) Result
   - Identify work student

Hospital Patient Data Analysis

1. Data collection Sources
   - Patieent registration form
   - Laborotry reports
   - medical devices.
2. Data Preprocessing
   - Remove duplicate records
   - handle missing values
   - combine attendence, marks
3. Data Integration
4. Data Transformation
   - normalize numerical values
   - calculate total and average marks
5. Data Analysis
   - Analyze attendence
   - .
   - support diagonosis
6. outcomes
   - Improve treatment planning.

3. Data Cleaning for a online Shoping company

online shoping Dataset

1. Identify Data problems - • missing customer details
• Duplicate orders

2. Data cleaning steps - • handle missing value
• Remove duplicate records

3. Data validation - • check data types
• verify order details

4.) Clean Dataset - • Accurate customer information
• correct order

5) Data Analysis - • study customer purchasing Pattern

4.) smart city traffic Data Intregration

Smart city traffic

1. Data collection Sources - • cctv cames
• GPS devices

2. Data preprocessing - • Removing duplicate data
• handling missing value

3. Data Integration - • combination data from different
• match timestamps and location

4. Data transformation - • convert data into common forward

5. Data Analysis - • monitor traffic density
• Identity cogesation
- optimize traffic signal

6. outcomes

loan tranformation for loan Approval

loan approval predication

1. Data collection - • Income
• Age
• Jobtype

2- Data proprocessing - handle missing value
Remove duplicate records

3 4. Feature selection - • selection important features such as Income, loan, amount, credit score

6. Prediction - Predict loan approval or rejection support faster and more consistent loan decision.
