2) A hostipal has patient records for many years. How can Data Science be appiled?

sol) Data science can analyze a hospital's historical Patient records.

It can help identify diseases, risk factors and treatment Pattern

It can help doctors make better decisions.

4) A bank wants to detect supisicious transactions. how can Data Science be useful?

Datascience can analyze ~~can~~ bank transaction to find unusual Pattern

→ machine learning models can identify susipicious or fraudulent transaction.

6) A school wants to improve student performance. mention one befint of Data science in this case

Data Science ~~on~~ can analyze student's marks, attendance, and learning patterns. Teachers can provide personalized learning supports.

8) A transport department wants to reduce traffic congestion. How can Data science be appiled?

sol) Data science can analyze previous traffic, GPS, road, and vehicle data.

It can identity locations and times with heavy traffic.

10) A company has data in excel tables, customer reviews, images and videos. which facet of data is shown here

This shows the variety characteristic of Big Data:, the company has structured data such as excel tables.

12) An university stores student details in row and columns. what type of data structure is this)

this is structured Data. the student information is organized in row and columns. It can easily be stored and managed in data bases

14) A company collects a very large amount of daily user activity

this represents volume: the company collects a very large amount of user activity data every data. handling such he huge amounts of data is a big data challenge

16) A business wants to convert customer data into useful Sales b decisions. which Big Data characteristic is important?

the important characteristic is value. It means extracting useful information from data. Business ran use this information to make batter Sales decisions.

18) A Company wants to process large datasets using Parallel computation. which Big Data tool can be used.

Apache Spark can be used for this purpose. Spark process large datasets using Parallel and distrubuted computing It is widely for Big Data processing.

20) A company wants to visualize Big Data results for decision-makers. which tool or method can be applied?

Tools such as Power-BI / Tableau / and dashboards can create visual reports. This helps decision-markers understand data and make better decisions.
